

Renewable Energy Atlas of the West

Order Form

The Renewable Energy Atlas of the West is a resource for policy makers, advocates, landowners, developers and others engaged in the development of renewable energy resources for electricity generation. The Atlas is a compilation of existing data from a variety of sources, including recently released high-resolution wind maps of the Pacific Northwest. It is the region's most comprehensive, publicly available atlas of renewable resources and the issues involved in their development. Full-color regional and state maps include wind, solar, geothermal and biomass resources, as well as transmission lines and locations of constraint, existing generating facilities, renewable energy policies, land ownership, load growth, and potential power production estimates. The Atlas contains regional overview maps and detailed state-specific pages for all 11 Western states. The Atlas is a project of the Hewlett and Energy Foundations, and was produced by the Land and Water Fund of the Rockies, Northwest SEED and GreenInfo Network.

The Atlas will be available in print in August and online as interactive, searchable maps at www.energyatlas.org in September. Please direct questions regarding the Atlas to Leslie Kaas Pollock at the Land and Water Fund, 303-444-1188 x216, leslie@lawfund.org.
